Description of Change to the Customer:

These Intel products listed in the Products Affected tables below will undergo the following changes:

1. ACL (Access Control List) NVM update: Customers implementing MCTP (Management Component Transport Protocol) over PCIE need to ensure backwards compatibility to the MCTP over PCI Express Access Control Extensions v0.7 spec. This requires that the ACL bit (PCIE Control11 offset 0x001B) be disabled. This is because ACL is enabled by default on our retail and OEMgen NICs.
2. The Intel® Server Board S2600WT Family boards fail to POST with old CLP (Command Line Protocol) code in OPRM. Update to version 22.9 fixes the POST hang issue.
3. The Taiwan BSMI has a new RoHS declaration and inspection mark.
 - The BSMI logo will be updated on the board level regulatory label and on all packaging labels:

4. Ukraine has a new RoHS declaration that will be added to the outer box packaging label.

5. In order to align all our products and labels with the JEDEC 609A Standard for board assembly marking, we will remove the HF or LF (as applicable) from all outer box packaging labels if it currently exists there.
