Product Change Notification

Change Notification #: 110451 - 00
Change Title: Intel® RAID Controller SRCASJV, Single, PCN 110451-00, Product Design, Product Design, Eliminating PCIe SMBUS connectivity from 1078 Controller
Date of Publication: January 31, 2011

Key Characteristics of the Change:

Product Design

Forecasted Key Milestones:

Date of First Availability of Post-Conversion Material:	Feb 28, 2011
--	--------------

The date of "First Availability of Post-Conversion Material" is the projected date that a customer may expect to receive the Post-Conversion Materials. This date is determined by the projected depletion of inventory at the time of the PCN publication. The depletion of inventory may be impacted by fluctuating supply and demand, therefore, although customers should be prepared to receive the Post-Converted Materials on this date, Intel will continue to ship and customers may continue to receive the pre-converted materials until the inventory has been depleted.

Description of Change to the Customer:

If the controller is powered down in a system, the 1078 ROC chip pulls the PCIe SMBUS signal to ground, effectively disabling SMBUS to the entire system. Since the 1078 ROC chip does not use the PCIe SMBUS for any functionality, eliminating this connection has no affect on the controller and allows the SMBUS to work throughout the system as needed.

Customer Impact of Change and Recommended Action:

Intel does not foresee any adverse customer impact from this change. Standard level evaluation may be performed as deemed necessary

Products Affected / Intel Ordering Codes:
