Description of Change to the Customer:

Intel is implementing the following changes on the Intel® Server System R1208SPOSHORR, Intel® Server System R1304SPOSHBNR, and Intel® Server System R1304SPOSHORR.

Due to a MOSFET component End of Life (EOL) by one of Intel's vendors, the following changes were made to the design of the Intel® Server Board S1200SP Family.

The following components will be changed:

1. MOSFET U2B1 will be replaced with a new part not scheduled for EOL. The MOSFET is part of P5V_Aux switch circuit.
2. EU8J1 changed due to the original part scheduled for End of Life. This IC is a 1G DDR memory used by the Baseboard Motherboard Controller (BMC).

Both new components are identical in function or form factor to the previous ones, and no functionality is affected by the change.

Customer Impact of Change and Recommended Action:

Intel does not expect any impact to customers from these changes, but encourages customers to understand the change and determine the impact on their applications.
