Product Change Notification

Change Notification #: 113201 - 00
Change Title: Intel® Server System R1208GZ4GS9
PCN 113201-00, Product Design
Update the Rear Panel and the 750W
Common Redundant Power Supply
FXX750PCRPS Firmware
Date of Publication: August 13, 2014

Key Characteristics of the Change:

Product Design

Forecasted Key Milestones:

Date Customer Must be Ready to Receive Post-Conversion Material *:	Aug 28, 2014
---	--------------

* Intel appreciates the customer's desire to receive the latest revision of products. However, Intel manages inventory on a first in first out (FIFO) basis at the MM# level. Subsequently, customer requests for a specific revision of material (below the MM#) will not be supported by Intel.

Description of Change to the Customer:

Intel has implemented the following changes on the Intel® Server System R1208GZ4GS9:

1. Update the system rear panel so that more PCIe devices and cable connectors can mechanically fit into the system. Please refer to the following pictures for details:

Pre-change:

Post-change:

2. Update the 750W Common Redundant Power Supply FXX750PCRPS firmware revision to v100 to prevent a power race condition from occurring during an AC power loss event when the power supply is in cold redundancy mode. The part number of the power supply has been updated from E98791-009 to E98791-010.

The new power supply firmware v100 has also been incorporated into the system BMC firmware revision 01.20.5793, which automatically updates the power supply to the latest revision when a full system software update is performed using a System Update Package (SUP).

Please refer to the Technical Advisory TA-1050-2 for more information.

Customer Impact of Change and Recommended Action:

Intel does not expect any impact to customers from these changes. Customers may need to validate the function and feature changes once the post-change system is available.
